

Composite: MFS Global Growth Concentrated Equity Composite in EUR

Benchmark: MSCI AC World Index - Net Return

Creation Date: 06-May-2013

Inception Date: 01-Apr-2013

Composite Description: The MFS Global Growth Concentrated Equity Composite includes all discretionary portfolios managed to the MFS Global Growth Concentrated Equity strategy. The strategy seeks long-term capital appreciation by investing principally in a concentrated portfolio of 20-30 stocks of companies worldwide that have the potential to generate higher earnings growth and returns over the long term than their industry, and whose stock valuations do not fully reflect their long-term growth prospects. Investments in certain markets can involve greater risk and volatility because of adverse market, currency, economic, industry, political, regulatory, geopolitical, or other conditions. Stock markets and investments in individual stocks are volatile and can decline significantly in response to or investor perception of, issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. Investments in growth companies can be more sensitive to the company's earnings and more volatile than the stock market in general. Emerging markets can have less market structure, depth, and regulatory, custodial or operational oversight and greater political, social, geopolitical and economic instability than developed markets. The portfolio's performance could be more volatile than the performance of more diversified portfolios.

Performance for periods less than one year are not annualized.

Total Gross of fee returns in EUR (includes both capital appreciation and reinvestment of income) are net of transaction costs, withholding taxes and direct expenses, but before management fees, custody and other indirect expenses. Typical separate accounts utilize 4:00 PM (London Time) foreign exchange rates; retail products will use rates deemed most appropriate for daily NAV per share calculations. The possibility exists for performance dispersion between otherwise similarly managed accounts and also with the benchmark.

Net of fee returns presented in this table are gross of fee returns reduced by management fees and performance fees if applicable (actual fees). For certain accounts where the actual fees are unavailable, the maximum applicable annual institutional separate account fees were applied.

Total returns of the benchmark are provided for each period depicted, expressed in EUR. Source of Benchmark Performance: FACTSET ®.

MSCI AC World Index - Net Return - a market capitalization-weighted index that is designed to measure equity market performance in the global developed and emerging markets.

Composite Dispersion is measured by the asset-weighted standard deviation of gross of fees account returns for all accounts in the composite for the full period. For composites containing less than six accounts for the full period, dispersion is deemed not meaningful and is not presented. The three-year annualized ex post standard deviation measures the variability of the gross of fees composite returns and the benchmark returns over the preceding 36-month period.

The MFS Global Growth Concentrated Equity Composite is a US Dollar based composite available globally. The regional composite depicted here was created on 26-August-2016 for presentation in the European market. Where appropriate, data has been converted to Euro and the fees and breakpoints depicted are applicable to clients in this market.

Historical performance results may have differed had the composite included assets of client accounts during these time periods for various reasons including the impact of cash flows.

The composite asset minimum changed from 2MM USD to 1MM USD effective 1-Nov-2022.

Prior to 1-Sep-2023, the maximum institutional separate account fee charged for this product was 80 bps.
