

**Composite:** MFS Global Value Equity Composite in CAD

**Benchmark:** MSCI The World Index Value - Net Return

**Creation Date:** 27-Oct-2006

**Inception Date:** 01-Jul-2003

**Composite Description:** The MFS Global Value Equity Composite includes all discretionary portfolios managed to the MFS Global Value Equity strategy that have unhedged currency exposure and do not have extensive guideline restrictions. The strategy seeks capital appreciation and reasonable income by investing principally in U.S. and non-U.S. equities that are attractively valued. Investments in certain markets can involve greater risk and volatility because of adverse market, currency, economic, industry, political, regulatory, geopolitical, or other conditions. Stock markets and investments in individual stocks are volatile and can decline significantly in response to or investor perception of, issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. The portfolio's investments can continue to be undervalued for long periods of time, not realize their expected value, and be more volatile than the stock market in general.

#### Institutional Separate Accounts Fee Schedule

Performance for periods less than one year are not annualized.

Total Gross of fee returns in CAD (includes both capital appreciation and reinvestment of income) are net of transaction costs, withholding taxes and direct expenses, but before management fees, custody and other indirect expenses. Certain institutional accounts hold Canadian trusts subject to custody and other indirect expenses. Typical separate accounts utilize 4:00 PM (London Time) foreign exchange rates; retail products will use rates deemed most appropriate for daily NAV per share calculations. The possibility exists for performance dispersion between otherwise similarly managed accounts and also with the benchmark.

Net of fee returns presented in this table are gross of fee returns reduced by management fees and performance fees if applicable (actual fees). For certain accounts where the actual fees are unavailable, the maximum applicable annual institutional separate account fees were applied.

Total returns of the benchmark are provided for each period depicted, expressed in CAD. Source of Benchmark Performance: FACTSET ®.

MSCI World Index Value - Net Return - a market capitalization-weighted index that is designed to measure equity market performance for value securities in the global developed markets.

Composite Dispersion is measured by the asset-weighted standard deviation of gross of fees account returns for all accounts in the composite for the full period. For composites containing less than six accounts for the full period, dispersion is deemed not meaningful and is not presented. The three-year annualized ex post standard deviation measures the variability of the gross of fees composite returns and the benchmark returns over the preceding 36-month period.

The MFS Global Value Equity Composite is a US Dollar based composite available globally. The regional composite depicted here was created on 27-Jun-2011 for presentation in the Canadian market. Where appropriate, data has been converted to Canadian Dollar and the fees and breakpoints depicted are applicable to clients in this market.
