

Fact Sheet

MFS® Lifetime® 2025 Fund

Objective

Seeks a high level of total return consistent with its asset allocation until the approximate retirement year in the fund's name; thereafter, the fund will seek total return through a combination of current income and capital appreciation. The asset allocation of the fund will change over time.

Team of Quantitative Professionals

General Oversight

Ben Nastou, CFA

- 25 years with MFS
- 24 years in industry

Natalie Shapiro, Ph.D.

- 29 years with MFS
- 31 years in industry

Erich Shigley, CFA

- 12 years with MFS
- 25 years in industry

Fund benchmark

Standard & Poor's 500 Stock Index

Risk measures vs. benchmark (Class I)

Alpha	-0.70
Beta	0.48
Sharpe Ratio	0.57
Standard Deviation	7.84

Risk measures are based on a trailing 10 year period.

Fund Symbol and CUSIP

I	LTTIX	55279J858
R6	LTTKX	55275E259
A	LTTAX	55279J882
C	LTTCX	55279J866

Provides convenient access to a professionally allocated, broadly diversified, rebalanced portfolio of MFS funds in a single investment. The allocation strategy will become more conservative as the fund's target date approaches.

Holdings (%)

2.4% Cash & Cash Equivalents

Growth of \$10,000 Class I shares 09/30/15 – 09/30/25

Past performance is no guarantee of future results. Fund returns assume the reinvestment of dividends and capital gain distributions. Class I shares are available without a sales charge to eligible investors.

Average annual total returns (%)

	Inception Date	10 Year	5 Year	3 Year	1 Year
Class I	11/02/12	6.55	5.27	9.97	6.14
Class R6	08/29/16	6.68	5.42	10.13	6.33
Class A without sales charge	11/02/12	6.30	5.02	9.73	5.93
Class A with 5.75% maximum sales charge	11/02/12	5.67	3.78	7.58	-0.17
Standard & Poor's 500 Stock Index	N/A	15.30	16.47	24.94	17.60

Performance data shown represent past performance and are no guarantee of future results. Investment return and principal value fluctuate so your shares, when sold, may be worth more or less than the original cost; current performance may be lower or higher than quoted. For most recent month-end performance, please visit mfs.com.

Performance results reflect any applicable expense subsidies and waivers in effect during the periods shown. Without such subsidies and waivers the fund's performance results would be less favorable. All results assume the reinvestment of dividends and capital gains. It is not possible to invest directly in an index.

Performance for Class R shares includes the performance of the fund's Class I shares, adjusted to take into account differences in sales loads and class-specific operating expenses (such as Rule 12b-1 fees), if any, for periods prior to their offering. Please see the prospectus for additional information about performance and expenses.

Class R6 shares are available without a sales charge to eligible investors.

Portfolio characteristics are based on equivalent exposure, which measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ. The portfolio is actively managed, and current holdings may be different.

Glossary

Alpha is a measure of the portfolio's risk-adjusted performance. When compared to the portfolio's beta, a positive alpha indicates better-than-expected portfolio performance and a negative indicates alpha worse-than-expected portfolio performance.

Beta is a measure of the volatility of a portfolio relative to the overall market. A beta less than 1.0 indicates lower risk than the market; a beta greater than 1.0 indicates higher risk than the market. It is most reliable as a risk measure when the return fluctuations of the portfolio are highly correlated with the return fluctuations of the index chosen to represent the market.

Sharpe Ratio is a risk-adjusted measure calculated to determine reward per unit of risk. It uses a standard deviation and excess return. The higher the Sharpe Ratio, the better the portfolio's historical risk-adjusted performance.

Standard Deviation is an indicator of the portfolio's total return volatility, which is based on a minimum of 36 monthly returns. The larger the portfolio's standard deviation, the greater the portfolio's volatility.

Market Capitalization is the value of a corporation as determined by the market price of its outstanding common stock. It is calculated by multiplying the number of shares by the current market price of a share.

Price/Book ratio (P/B) is the ratio of a stock's price to its book value per share.

Weighted average price/earnings (P/E) ratio is the ratio of the current price of a stock to an estimate of forward 12 month earnings; P/E ex-negatives ratio is an exposure-weighted average of the P/E ratios of the securities held, excluding companies with projected negative earnings.

Turnover Ratio is the percentage of a portfolio's securities that have changed over the course of a year: (lesser of purchases or sales)/average market value.

Average Effective Maturity is a weighted average of maturity of the bonds held in a portfolio, taking into account any prepayments, puts, and adjustable coupons which may shorten the maturity. Longer-maturity funds are generally considered more interest-rate sensitive than shorter maturity funds.

Average Effective Duration is a measure of how much a bond's price is likely to fluctuate with general changes in interest rates, e.g., if rates rise 1.00%, a bond with a 5-year duration is likely to lose about 5.00% of its value.

CALENDAR YEAR TOTAL RETURNS (%)										
	'15	'16	'17	'18	'19	'20	'21	'22	'23	'24
Class I	-0.51	7.68	13.16	-3.98	17.81	10.61	8.61	-12.33	10.34	6.72
Standard & Poor's 500 Stock Index	1.38	11.96	21.83	-4.38	31.49	18.40	28.71	-18.11	26.29	25.02

Past performance is no guarantee of future results.

FUND EXPENSES (%)			
	Class I	Class R6	Class A
Gross Expense Ratio	0.68	0.54	0.93
Net Expense Ratio	0.45	0.31	0.70

Gross Expense Ratio is the fund's total operating expense ratio from the fund's most recent prospectus. **Net Expense Ratio** reflects the reduction of expenses from contractual fee waivers and reimbursements. Elimination of these reductions will result in higher expenses and lower performance. These reductions will continue until at least August 31, 2026.

FUND DATA	
Inception Date	11/02/12
Net Assets	\$339.7 million
Number of Issues	4288
Market Cap (weighted avg.)	\$491.0 billion
Price/Book (weighted avg.)	2.8
Price/Earnings (12 months forward weighted avg.)	18.5
Turnover Ratio	9%
Avg. Eff. Maturity	5.9 years
Avg. Eff. Duration	4.3 years

Important risk considerations

The fund may not achieve its objective and/or you could lose money on your investment in the fund. You may experience losses near, at, or after the target date. There is no guarantee of the fund's principal value, including at the target date, or that the fund will provide adequate income at and through your retirement. ■ **Stock:** Stock markets and investments in individual stocks are volatile and can decline significantly in response to or investor perception of, issuer, market, economic, industry, political, regulatory, geopolitical, environmental, public health, and other conditions. ■ **Bond:** Investments in debt instruments may decline in value as the result of, or perception of, declines in the credit quality of the issuer, borrower, counterparty, or other entity responsible for payment, underlying collateral, or changes in economic, political, issuer-specific, or other conditions. Certain types of debt instruments can be more sensitive to these factors and therefore more volatile. In addition, debt instruments entail interest rate risk (as interest rates rise, prices usually fall). Therefore, the portfolio's value may decline during rising rates. Portfolios that consist of debt instruments with longer durations are generally more sensitive to a rise in interest rates than those with shorter durations. At times, and particularly during periods of market turmoil, all or a large portion of segments of the market may not have an active trading market. As a result, it may be difficult to value these investments and it may not be possible to sell a particular investment or type of investment at any particular time or at an acceptable price. The price of an instrument trading at a negative interest rate responds to interest rate changes like other debt instruments; however, an instrument purchased at a negative interest rate is expected to produce a negative return if held to maturity. ■ **International:** Investments in foreign markets can involve greater risk and volatility than U.S. investments because of adverse market, currency, economic, industry, political, regulatory, geopolitical, or other conditions. ■ **Underlying Funds:** MFS' strategy of investing in underlying funds exposes the fund to the risks of the underlying funds. Each underlying fund pursues its own objective and strategies and may not achieve its objective. In addition, shareholders of the fund will indirectly bear the fees and expenses of the underlying funds. ■ Please see the prospectus for further information on these and other risk considerations.
