(a) The maturity date as determined under rule 2a-7, taking into account the maturity shortening provisions of rule 2a-7(d).

(b) The final legal maturity date takes into account any maturity date extensions that may be effected at the option of the issuer or the effect of the securities' next demand feature date, if any.

(c) For commercial paper and other non-interest bearing securities generally traded on a discount basis, the coupon rate shown represents the market yield as of the date of this report. Other securities normally bear interest at the coupon rate shown.

Weighted Average Maturity (WAM) calculates an average time to maturity of all of the securities held in the portfolio, weighted by each security's percentage of the portfolio's amortized cost. The calculation takes into account any maturity shortening provisions such as demand features and interest rate resets.

Weighted Average Life (WAL) calculates an average time to maturity of all of the securities held in the portfolio, weighted by each security's percentage of the portfolio's amortized cost. The calculation takes into account consideration for both maturity date extensions or any maturity shortening provisions such as demand features on a security, but not interest rate resets.

The portfolio is actively managed and current holdings may be different.
