Historically, bull markets have beaten bears and driven long-term gains

A pause, a correction or a bear market. While no one likes market declines, they are part of investing. But over time, stock markets have moved higher, bouncing back from declines. If you sell when the market falls, you’ll likely miss a potential rebound and any subsequent gains, possibly falling short of your goals. Talk to your advisor about having a long-term plan, one that can work through market volatility and helps you pursue your long term goals.

Investing for the long term and having a disciplined plan can help you work toward reaching your goals.

The Dow Jones Industrial Average (DJI) measures the US stock market.
Buy Low, Sell Why?

Moving out of the market can cost you

Selling stocks at the first sign of a market decline may make you feel better over the short term, but it can cost your portfolio over the long term. Consistently predicting when those days will occur is close to impossible. Sticking to your plan and staying invested can help you make the most of them. Because as you can see, missing out on them can limit your portfolio’s long-term potential.

Growth of $10,000 in the S&P 500 Index, 20 years ending 12/31/18
