Stocks — historically, a good place for long-term investors

Despite the many national and international crises throughout the past 30 years, investing in stocks has kept investors on track in pursuing their long-term goals.

Important risk considerations

Source: SPAR, Bureau of Labor Statistics.

MARKET SEGMENT	REPRESENTED BY	IMPORTANT RISK CONSIDERATIONS
US Stocks	Standard & Poor's 500 Stock Index ¹	US Stocks: Common stocks generally provide an opportunity for more capital appreciation than fixed-income investments but are also subject to greater market fluctuations. US Bonds and Cash: Corporate bonds, US Treasury bills, and US government bonds fluctuate in value, but if held to maturity, offer a fixed rate of return and a fixed principal value.
US Bonds	Bloomberg U.S. Aggregate Bond Index ²	
Cash	FTSE 3-month Treasury Bill Index ³	
Inflation	Consumer Price Index ⁴	

Keep in mind that all investments, including mutual funds, carry a certain amount of risk including the possible loss of the principal amount invested.

1 The S&P 500 Stock Index measures the broad US stock market. **2 The Bloomberg U.S. Aggregate Bond Index** measures the US bond market.

3 The FTSE 3-month Treasury Bill Index tracks the daily performance of 3-month US Treasury bills. **4 The Consumer Price Index** measures the average change in prices over time in a fixed market basket of goods and services.

It is not possible to invest directly in an index. Index performance does not take into account investment-related fees and expenses.

Talk with your financial professional about the role stocks could play in your long-term portfolio. The investments you choose should correspond to your financial needs, goals, and risk tolerance. For assistance in determining your financial situation, please consult an investment professional.
