

20 years of the best and worst – a case for diversification

Everyone wants to be in the best-performing asset class every year. The thing is, few people are savvy enough to consistently choose the best. That's why diversification is key. This chart shows annual returns for eight broad-based asset classes, cash, and a diversified portfolio ranked from best to worst. Notice how the "leadership" changes from year to year, and how competitively the diversified portfolio performed over 20 years (see the "average" column).

Important risk considerations

International:

Investing in foreign and/or emerging market securities involves interest rate, currency exchange rate, economic, and political risks. These risks are magnified in emerging or developing markets as compared with domestic markets.

Small/Mid Cap stocks:

Investing in small and/or mid-sized companies involves more risk than that customarily associated with investing in more-established companies.

Bonds:

Bonds, if held to maturity, provide a fixed rate of return and a fixed principal value. Bond funds will fluctuate and, when redeemed, may be worth more or less than their original cost.

Diversification does not guarantee a profit or protect against a loss.

See other side for important information.

MAKE DIVERSIFICATION WORK FOR YOU

Strike the proper balance

Diversification — spreading your assets among investment types, styles, and markets — is one of the few time-tested strategies for investors with long-term financial goals. A well-diversified portfolio of stock and bond holdings may help reduce your exposure to the downside risks of individual holdings. As you can see in the charts to the right, stocks and bonds have historically performed differently over time.

Stick to your plan

When tempted by current market conditions, investors should stay true to a long-term financial plan. We know the stock market buzz never stops. But desire and impulse are never good substitutes for rational thought and a disciplined plan. Look no further than the dot-com phenomenon to see a hot bubble burst.

Does this mean that you should put all of your money in just stocks? Or just bonds? No. Just because an investment type or style outperforms one year, there is no guarantee that it will outperform the next. Stay diversified.

Stocks vs. bonds over the past 20 years

Keep in mind that all investments carry a certain amount of risk including possible loss of the principal amount invested.

No investment strategy, including diversification and asset allocation, guarantees a profit or protects against a loss.

Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in debt instruments may decline in value as the result of declines in the credit quality of the issuer, borrower, counterparty, or other entity responsible for payment, underlying collateral, or changes in economic, political, issuer-specific, or other conditions. Certain types of debt instruments can be more sensitive to these factors and therefore more volatile. In addition, debt instruments entail interest rate risk (as interest rates rise, prices usually fall), therefore the Fund's share price may decline during rising rates. Funds that consist of debt instruments with longer durations are generally more sensitive to a rise in interest rates than those with shorter durations. At times, and particularly during periods of market turmoil, all or a large portion of segments of the market may not have an active trading market. As a result, it may be difficult to value these investments and it may not be possible to sell a particular investment or type of investment at any particular time or at an acceptable price. The price of an instrument trading at a negative interest rate responds to interest rate changes like other debt instruments; however, an instrument purchased at a negative interest rate is expected to produce a negative return if held to maturity.

1 Citigroup 3-month T-bill Index is derived from secondary market Treasury bill rates published by the Federal Reserve Bank. **2 Bloomberg Barclays U.S. Aggregate Bond Index** measures the US bond market. **3 JPMorgan Global Government Bond Index (Unhedged)** measures government bond markets around the world. **4 Russell 1000® Value Index** measures large-cap US value stocks. **5 Bloomberg Commodity Index** is composed of futures contracts on physical commodities. **6 MSCI EAFE Index** measures the non-US stock market. **7 Russell 1000® Growth Index** measures large-cap US growth stocks. **8 Russell 2500 Index** measures small- and mid-cap US stocks. **9 FTSE NAREIT All REITs Total Return Index** tracks the performance of commercial real estate across the US economy.
