

Asset class

Lifetime Funds

Objective

Seeks a high level of total return consistent with its asset allocation until the approximate retirement year in the fund's name; thereafter, the fund will seek total return through a combination of current income and capital appreciation. The asset allocation of the fund will change over time.

Portfolio management

Team of Quantitative Professionals

General Oversight by Joseph C. Flaherty, Jr.

- 22 years with MFS
- 30 years in industry

Fund benchmark

Standard & Poor's 500 Stock Index measures the broad U.S. stock market.

Maximum sales charge

Class A shares

5.75% initial sales charge

Fund symbol and CUSIP

I	LFEDX	55279J767

Portfolio characteristics data are based on the equivalent exposure of unaudited net assets as of 12/31/14. Equivalent exposure measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ. The portfolio is actively managed, and current holdings may be different.

- NOT FDIC INSURED
- MAY LOSE VALUE
- NO BANK GUARANTEE

An automatically reallocated portfolio of MFS funds

Provides convenient access to a professionally allocated, broadly diversified, rebalanced portfolio of MFS funds in a single investment. The allocation strategy will become more conservative as the fund's target date approaches.

Class I	—	—	—	—	—	—	—	—	23.57	4.04

Glossary

Market capitalization is the value of a corporation as determined by the market price of its issued and outstanding common stock. It is calculated by multiplying the number of outstanding shares by the current market price of a share.

Price/book ratio (P/B) is the ratio of a stock's price to its book value per share.

Price/earnings ratio is the ratio of the current price of a stock to an estimate of forward 12 month earnings; P/E ex-negatives ratio is an exposure-weighted average of the P/E ratios of the securities held in the fund, excluding companies with projected negative earnings.

AVERAGE ANNUAL TOTAL RETURNS (%) AS OF 12/31/14

	Inception date	1 yr.	3 yr.	5 yr.	Life

Lipper Mixed-Asset Target 2035 Funds category average	N/A	5.29	—	—	—

Performance data shown represent past performance and are no guarantee of future results. Investment return and principal value fluctuate so your shares, when sold, may be worth more or less than the original cost; current performance may be lower or higher than quoted. For most recent month-end performance, please visit mfs.com.

Performance results reflect any applicable expense subsidies and waivers in effect during the periods shown. Without such subsidies and waivers the fund's performance results would be less favorable. All results assume the reinvestment of dividends and capital gains. The performance is as of the date shown; it may not include the fund's entire investment portfolio and is subject to change. It is not possible to invest directly in an index.

Class I shares ("I") have no sales charge or Rule 12b-1 fees and are available only to eligible investors.

FUND EXPENSES

	Class A	Class I
Gross Expense Ratio	1.40%	1.15%
Net Expense Ratio	1.01%	0.76%

Gross Expense Ratio is the fund's total operating expense ratio from the fund's most recent prospectus.

Net Expense Ratio reflects the reduction of expenses from fee waivers and reimbursements. Elimination of these reductions will result in higher expenses and lower performance. These reductions will continue until at least August 31, 2015.

FUND DATA

Commencement Date	11/02/12
Net Assets	\$92.1 million
Number of Issues	3151
Market Cap (weighted avg.)	\$57.27 billion
Price/Book	3.38
Price/Earnings (12 months forward ex-negatives)	17.9

NAV HISTORY (Class A)

12-month low	\$11.68
12-month high	\$12.99

IMPORTANT RISK CONSIDERATIONS

The fund may not achieve its objective and/or you could lose money on your investment in the fund. You may experience losses near, at, or after the target date. There is no guarantee that the fund will provide adequate income at and through your retirement. Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. Investments in debt instruments may decline in value as the result of declines in the credit quality of the issuer, borrower, counterparty, or other entity responsible for payment, underlying collateral, or changes in economic, political, issuer-specific, or other conditions. Certain types of debt instruments can be more sensitive to these factors and therefore more volatile. In addition, debt instruments entail interest rate risk (as interest rates rise, prices usually fall), therefore the Fund's share price may decline during rising rate environments as the underlying debt instruments in the portfolio adjust to the rise in rates. Funds that consist of debt instruments with longer durations are generally more sensitive to a rise in interest rates than those with shorter durations. At times, and particularly during periods of market turmoil, all or a large portion of segments of the market may not have an active trading market. As a result, it may be difficult to value these investments and it may not be possible to sell a particular investment or type of investment at any particular time or at an acceptable price. Investments in foreign markets can involve greater risk and volatility than U.S. investments because of adverse market, economic, industry, political, regulatory, geopolitical, or other conditions. Investments in small-cap companies can be more volatile than investments in larger companies. MFS' strategy of investing in underlying funds exposes the fund to the risks of the underlying funds. Each underlying fund pursues its own objective and strategies and may not achieve its objective. Please see the prospectus for further information on these and other risk considerations.
