C	MMUCX	552986705
I	MMUIX	552986879

Portfolio characteristics data are based on the equivalent exposure of unaudited net assets as of 9/30/17. Equivalent exposure measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ. The portfolio is actively managed, and current holdings may be different.

- NOT FDIC INSURED
- MAY LOSE VALUE
- NO BANK GUARANTEE

**Utilities stocks with strong growth prospects**

The fund focuses on utilities stocks believed to have strong growth prospects. These stocks generally come from the gas and electric utilities, telecommunications, and cable TV industries. A portion of the portfolio is typically invested in bonds and convertible securities.

**INDUSTRIES AS OF 09/30/17**

-0.2% Other  
Other consists of: (i) currency derivatives and/or (ii) any derivative offsets.

**Glossary**

**Alpha** is a measure of the portfolio's risk-adjusted performance. When compared to the portfolio's beta, a positive alpha indicates better-than-expected portfolio performance and a negative alpha worse-than-expected portfolio performance.

**Beta** is a measure of the volatility of a portfolio relative to the overall market. A beta less than 1.0 indicates lower risk than the market; a beta greater than 1.0 indicates higher risk than the market. It is most reliable as a risk measure when the return fluctuations of the portfolio are highly correlated with the return fluctuations of the index chosen to represent the market.

**R<sup>2</sup>** represents the percentage of the portfolio's movements that can be explained by the general movements of the market. Index portfolios will tend to have values very close to 100.

**Standard deviation** is an indicator of the portfolio's total return volatility, which is based on a minimum of 36 monthly returns. The larger the portfolio's standard deviation, the greater the portfolio's volatility.

**Market capitalization** is the value of a corporation as determined by the market price of its issued and outstanding common stock. It is calculated by multiplying the number of outstanding shares by the current market price of a share.

**Price/book ratio (P/B)** is the ratio of a stock's price to its book value per share.

**Price/earnings (12 months forward)** is the ratio of the current price of a stock to an estimate of forward 12 month earnings.

**Turnover ratio** is the percentage of a portfolio's assets that have changed over the course of a year. It is calculated by dividing the average assets during the period by the lesser of the value of purchases and the value of sales during the same period.

**AVERAGE ANNUAL TOTAL RETURNS (%) AS OF 9/30/17**

	Inception date	1 yr.	3 yr.	5 yr.	10 yr.
Class A <b>without sales charge</b>	02/14/92	11.77	3.06	8.38	5.78

**Performance data shown represent past performance and are no guarantee of future results. Investment return and principal value fluctuate so your shares, when sold, may be worth more or less than the original cost; current performance may be lower or higher than quoted. For most recent month-end performance, please visit mfs.com.**

Performance results reflect any applicable expense subsidies and waivers in effect during the periods shown. Without such subsidies and waivers the fund's performance results would be less favorable. All results assume the reinvestment of dividends and capital gains. The performance is as of the date shown; it may not include the fund's entire investment portfolio and is subject to change. It is not possible to invest directly in an index.

Class I shares ("I") have no sales charge or Rule 12b-1 fees and are available only to eligible investors.

**FUND EXPENSES**

	Class A	Class I
Gross Expense Ratio	0.99%	0.74%
Net Expense Ratio	0.99%	0.74%

**Gross Expense Ratio** is the fund's total operating expense ratio from the fund's most recent prospectus.

**Net Expense Ratio** reflects the reduction of expenses from fee waivers and reimbursements. Elimination of these reductions will result in higher expenses and lower performance.

**NAV HISTORY (Class A)**

12-month low	\$17.44
12-month high	\$20.70

**FUND DATA**

Commencement Date	02/14/92
Net Assets	\$3,858.4 million
Number of Issues	85
Market Cap (weighted avg.)	\$28.92 billion
Price/Book	2.04
Price/Earnings (12 months forward)	19.21
Turnover Ratio	25%

**RISK MEASURES VS. BENCHMARK (Class I)**

Alpha	0.84
Beta	0.79
R <sup>2</sup>	54.90
Standard Deviation	14.95

Risk measures are based on a trailing 10 year period.

**IMPORTANT RISK CONSIDERATIONS**

The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in foreign markets can involve greater risk and volatility than U.S. investments because of adverse market, currency, economic, industry, political, regulatory, geopolitical, or other conditions. • Investments in the utilities sector can be very volatile because of supply and/or demand for services or fuel, financing costs, conservation efforts, the negative impact of regulation, and other factors. • Please see the prospectus for further information on these and other risk considerations.
