* Periods less than one year are actual not annualized.

Performance data shown represent past performance and are no guarantee of future results. Investment return and principal value fluctuate so your shares, when sold, may be worth more or less than the original cost; current performance may be lower or higher than quoted. For most recent month-end performance, please visit mfs.com.

Class 529A shares are only available in conjunction with qualified tuition programs, such as the MFS 529 Savings Plan.

For Performance Reporting Purposes

Sales Charge

Class 529A shares ("529A") results include the maximum sales charge.

Blended Performance Expense Considerations

¹ Performance for Class 529 shares includes the performance of the fund's Class 1 shares, adjusted to take into account differences in sales loads and class-specific operating expenses (such as Rule 12b-1 fees), if any, for periods prior to their offering. Please see the prospectus for additional information about performance and expenses.

Performance results reflect any applicable expense subsidies and waivers in effect during the periods shown. Without such subsidies and waivers the fund's performance results would be less favorable. All results assume the reinvestment of dividends and capital gains. The performance is as of the date shown; it may not include the fund's entire investment portfolio and is subject to change.

There is a \$25 annual account fee associated with the MFS 529 Savings Plan. This annual fee is waived for Oregon residents and for those accounts with assets of \$25,000 or more. Investments in 529 plans involve investment risks. You should consider your financial needs, goals, and risk tolerance prior to investing. Clients investing in 529 savings plans should consult a tax advisor or other financial professional to ensure that they obtain the desired tax benefits. Tax benefits of investing in 529 plans depend on meeting distinct requirements such as whether an investor's home state offers state tax or other benefits only available in the home state 529 college savings plan. Withdrawals of earnings not used to pay for qualified higher education expenses are subject to federal income tax and may be subject to an additional 10% penalty. State taxes may also apply. These results do not include the \$25 annual account fee associated with the MFS 529 Savings Plan. If this fee was reflected, the performance shown for the Class 529 shares would have been lower.

The MFS® 529 Savings Plan is a flexible college investing plan sponsored by the state of Oregon, acting by and through the Oregon 529 College Savings Board, and is administered by MFS Investment Management. Depending on your state of residence and the state of residence of the beneficiary, an investment in the MFS 529 Savings Plan may not afford you or your beneficiary state tax or other benefits only available for investments in such state's qualified tuition program.

E1 Gross Expense Ratio is the fund's total operating expense ratio from the fund's most recent prospectus. **Net Expense Ratio** reflects the reduction of expenses from fee waivers and reimbursements. Elimination of these reductions will result in higher expenses and lower performance. These reductions will continue until at least date noted under the "Waiver End Date" column.

Before investing in the MFS® 529 Savings Plan, consider the investment objectives, risks, charges, and expenses. For a prospectus, or summary prospectus, containing this and other information, as well as a Participant Agreement and Disclosure Statement and Expense Supplement, contact your investment professional or view online at mfs.com. Read it carefully.

* Periods less than one year are actual not annualized.

Performance data shown represent past performance and are no guarantee of future results. Investment return and principal value fluctuate so your shares, when sold, may be worth more or less than the original cost; current performance may be lower or higher than quoted. For most recent month-end performance, please visit mfs.com.

Class 529B shares are only available in conjunction with qualified tuition programs, such as the MFS 529 Savings Plan.

For Performance Reporting Purposes

Sales Charge

Class 529B shares ("529B") results include the applicable contingent deferred sales charge (CDSC), which declines over six years from 4% to 0%. The elimination of the charge begins six years after the end of the month in which shares were initially purchased.

Blended Performance Expense Considerations

¹ Performance for Class 529 shares includes the performance of the fund's Class I shares, adjusted to take into account differences in sales loads and class-specific operating expenses (such as Rule 12b-1 fees), if any, for periods prior to their offering. Please see the prospectus for additional information about performance and expenses.

Performance results reflect any applicable expense subsidies and waivers in effect during the periods shown. Without such subsidies and waivers the fund's performance results would be less favorable. All results assume the reinvestment

of dividends and capital gains. The performance is as of the date shown; it may not include the fund's entire investment portfolio and is subject to change.

There is a \$25 annual account fee associated with the MFS 529 Savings Plan. This annual fee is waived for Oregon residents and for those accounts with assets of \$25,000 or more. Investments in 529 plans involve investment risks. You should consider your financial needs, goals, and risk tolerance prior to investing. Clients investing in 529 savings plans should consult a tax advisor or other financial professional to ensure that they obtain the desired tax benefits. Tax benefits of investing in 529 plans depend on meeting distinct requirements such as whether an investors' home state offers state tax or other benefits only available in the home state 529 college savings plan. Withdrawals of earnings not used to pay for qualified higher education expenses are subject to federal income tax and may be subject to an additional 10% penalty. State taxes may also apply.

These results do not include the \$25 annual account fee associated with the MFS 529 Savings Plan. If this fee was reflected, the performance shown for the Class 529 shares would have been lower. The MFS® 529 Savings Plan is a flexible college investing plan sponsored by the state of Oregon, acting by and through the Oregon 529 College Savings Board, and is administered by MFS Investment Management. Depending on your state of residence and the state of residence of the beneficiary, an investment in the MFS 529 Savings Plan may not afford you or your beneficiary state tax or other benefits only available for investments in such state's qualified tuition program.

E1 Gross Expense Ratio is the fund's total operating expense ratio from the fund's most recent prospectus. **Net Expense Ratio** reflects the reduction of expenses from fee waivers and reimbursements. Elimination of these reductions will result in higher expenses and lower performance. These reductions will continue until at least date noted under the "Waiver End Date" column.

Before investing in the MFS® 529 Savings Plan, consider the investment objectives, risks, charges, and expenses. For a prospectus, or summary prospectus, containing this and other information, as well as a Participant Agreement and Disclosure Statement and Expense Supplement, contact your investment professional or view online at mfs.com. Read it carefully.

* Periods less than one year are actual not annualized.

Performance data shown represent past performance and are no guarantee of future results. Investment return and principal value fluctuate so your shares, when sold, may be worth more or less than the original cost; current performance may be lower or higher than quoted. For most recent month-end performance, please visit mfs.com.

Class 529C shares are only available in conjunction with qualified tuition programs, such as the MFS 529 Savings Plan.

For Performance Reporting Purposes

Sales Charge

Class 529C shares ("529C") have no initial sales charge but if they are redeemed within 1 year from the end of the prior month of purchase, they may be subject to a 1% contingent deferred sales charge (CDSC).

Blended Performance Expense Considerations

¹ Performance for Class 529 shares includes the performance of the fund's Class 1 shares, adjusted to take into account differences in sales loads and class-specific operating expenses (such as Rule 12b-1 fees), if any, for periods prior to their offering. Please see the prospectus for additional information about performance and expenses.

Performance results reflect any applicable expense subsidies and waivers in effect during the periods shown. Without such subsidies and waivers the fund's performance results would be less favorable. All results assume the reinvestment of dividends and capital gains. The performance is as of the date shown; it may not include the fund's entire investment portfolio and is subject to change.

There is a \$25 annual account fee associated with the MFS 529 Savings Plan. This annual fee is waived for Oregon residents and for those accounts with assets of \$25,000 or more. Investments in 529 plans involve investment risks. You should consider your financial needs, goals, and risk tolerance prior to investing. Clients investing in 529 savings plans should consult a tax advisor or other financial professional to ensure that they obtain the desired tax benefits. Tax benefits of investing in 529 plans depend on meeting distinct requirements such as whether an investor's home state offers state tax or other benefits only available in the home state 529 college savings plan. Withdrawals of earnings not used to pay for qualified higher education expenses are subject to federal income tax and may be subject to an additional 10% penalty. State taxes may also apply. These results do not include the \$25 annual account fee associated with the MFS 529 Savings Plan. If this fee was reflected, the performance shown for the Class 529 shares would have been lower.

The MFS® 529 Savings Plan is a flexible college investing plan sponsored by the state of Oregon, acting by and through the Oregon 529 College Savings Board, and is administered by MFS Investment Management. Depending on your state of residence and the state of residence of the beneficiary, an investment in the MFS 529 Savings Plan may not afford you or your beneficiary state tax or other benefits only available for investments in such state's qualified tuition program.

^{E1} Gross Expense Ratio is the fund's total operating expense ratio from the fund's most recent prospectus. Net Expense Ratio reflects the reduction of expenses from fee waivers and reimbursements. Elimination of these reductions will result in higher expenses and lower performance. These reductions will continue until at least date noted under the "Waiver End Date" column.

Before investing in the MFS® 529 Savings Plan, consider the investment objectives, risks, charges, and expenses. For a prospectus, or summary prospectus, containing this and other information, as well as a Participant Agreement and Disclosure Statement and Expense Supplement, contact your investment professional or view online at mfs.com. Read it carefully.

IMPORTANT RISK CONSIDERATIONS

Please see the prospectus for further information on these and other risk considerations.

STOCK FUNDS

Massachusetts Investors Trust	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions.
Massachusetts Investors Growth Stock Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in growth companies can be more sensitive to the company's earnings and more volatile than the stock market in general.
MFS® Blended Research® Small Cap Equity Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in foreign markets can involve greater risk and volatility than U.S. investments because of adverse market, currency, economic, industry, political, regulatory, geopolitical, or other conditions. • Investments in small-cap companies can be more volatile than investments in larger companies. • Real estate-related investments can be volatile because of general, regional, and local economic conditions, fluctuations in interest rates and property tax rates; shifts in zoning laws, environmental regulation and other governmental actions; increased operation expenses; lack of availability of mortgage funds; losses due to natural disasters; changes in property values and rental rates; overbuilding; losses due to casualty or condemnation, cash flows; and other factors. • The fund's strategy to blend fundamental and quantitative research and to have a consistent level of active risk over time may not produce the intended results. In addition, MFS fundamental research is not available for all issuers. • MFS' investment analysis, its development and use of quantitative models, and its selection of investments may not produce the intended results and/or can lead to an investment focus that results in the fund underperforming other funds with similar investment strategies and/or underperforming the markets in which the fund invests. Investments selected using quantitative models may not produce the intended results due to the factors used in the models, the weight placed on each factor in the models, changing sources of market return, and technical issues in the design, development, implementation, and maintenance of the models (e.g., incomplete or inaccurate data, programming or other software issues, and technology failures).
MFS® Mid Cap Growth Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in mid-cap companies can be more volatile than investments in larger companies. • Investments in growth companies can be more sensitive to the company's earnings and more volatile than the stock market in general.
MFS® Mid Cap Value Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in mid-cap companies can be more volatile than investments in larger companies. • Investments in value companies can continue to be undervalued for long periods of time, not realize their expected value, and be more volatile than the stock market in general.
MFS® New Discovery Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in small-cap companies can be more volatile than investments in larger companies. • Investments in growth companies can be more sensitive to the company's earnings and more volatile than the stock market in general. • The fund's performance may be closely tied to the performance of companies in a limited number of sectors and could be more volatile than the performance of less focused funds.
MFS® Total Return Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in debt instruments may decline in value as the result of declines in the credit quality of the issuer, borrower, counterparty, or other entity responsible for payment, underlying collateral, or changes in economic, political, issuer-specific, or other conditions. Certain types of debt instruments can be more sensitive to these factors and therefore more volatile. In addition, debt instruments entail interest rate risk (as interest rates rise, prices usually fall), therefore the Fund's share price may decline during rising rates. Funds that consist of debt instruments with longer durations are generally more sensitive to a rise in interest rates than those with shorter durations. At times, and particularly during periods of market turmoil, all or a large portion of segments of the market may not have an active trading market. As a result, it may be difficult to value these investments and it may not be possible to sell a particular investment or type of investment at any particular time or at an acceptable price. The price of an instrument trading at a negative interest rate responds to interest rate changes like other debt instruments; however, an instrument purchased at a negative interest rate is expected to produce a negative return if held to maturity. • Investments in value companies can continue to be undervalued for long periods of time, not realize their expected value, and be more volatile than the stock market in general.
MFS® Value Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in value companies can continue to be undervalued for long periods of time, not realize their expected value, and be more volatile than the stock market in general.

IMPORTANT RISK CONSIDERATIONS

ASSET ALLOCATION STRATEGIES	
MFS® Conservative Allocation Fund MFS® Moderate Allocation Fund MFS® Growth Allocation Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in debt instruments may decline in value as the result of declines in the credit quality of the issuer, borrower, counterparty, or other entity responsible for payment, underlying collateral, or changes in economic, political, issuer-specific, or other conditions. Certain types of debt instruments can be more sensitive to these factors and therefore more volatile. In addition, debt instruments entail interest rate risk (as interest rates rise, prices usually fall), therefore the Fund's share price may decline during rising rates. Funds that consist of debt instruments with longer durations are generally more sensitive to a rise in interest rates than those with shorter durations. At times, and particularly during periods of market turmoil, all or a large portion of segments of the market may not have an active trading market. As a result, it may be difficult to value these investments and it may not be possible to sell a particular investment or type of investment at any particular time or at an acceptable price. The price of an instrument trading at a negative interest rate responds to interest rate changes like other debt instruments; however, an instrument purchased at a negative interest rate is expected to produce a negative return if held to maturity. • Investments in foreign markets can involve greater risk and volatility than U.S. investments because of adverse market, currency, economic, industry, political, regulatory, geopolitical, or other conditions. • MFS' strategy of investing in underlying funds exposes the fund to the risks of the underlying funds. Each underlying fund pursues its own objective and strategies and may not achieve its objective.
MFS® Aggressive Growth Allocation Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in foreign markets can involve greater risk and volatility than U.S. investments because of adverse market, currency, economic, industry, political, regulatory, geopolitical, or other conditions. • Investments in small-cap companies can be more volatile than investments in larger companies. • MFS' strategy of investing in underlying funds exposes the fund to the risks of the underlying funds. Each underlying fund pursues its own objective and strategies and may not achieve its objective.
MFS® Lifetime® Income Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. There is no guarantee that the fund will provide adequate income at and through your retirement. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in debt instruments may decline in value as the result of declines in the credit quality of the issuer, borrower, counterparty, or other entity responsible for payment, underlying collateral, or changes in economic, political, issuer-specific, or other conditions. Certain types of debt instruments can be more sensitive to these factors and therefore more volatile. In addition, debt instruments entail interest rate risk (as interest rates rise, prices usually fall), therefore the Fund's share price may decline during rising rates. IMPORTANT RISK CONSIDERATIONS

Please see the prospectus for further information on these and other risk considerations.

GLOBAL/INTERNATIONAL FUNDS

MFS® International New Discovery Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in foreign markets can involve greater risk and volatility than U.S. investments because of adverse market, currency, economic, industry, political, regulatory, geopolitical, or other conditions. • Emerging markets can have less market structure, depth, and regulatory, custodial or operational oversight and greater political, social, and economic instability than developed markets. • Investments in small-cap companies can be more volatile than investments in larger companies. • The fund's performance may be closely tied to the performance of companies in a limited number of sectors and could be more volatile than the performance of less focused funds.
MFS® Research International Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Stock markets and investments in individual stocks are volatile and can decline significantly in response to issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. • Investments in foreign markets can involve greater risk and volatility than U.S. investments because of adverse market, currency, economic, industry, political, regulatory, geopolitical, or other conditions.

BOND FUNDS (TAXABLE)

MFS® High Income Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Investments in debt instruments may decline in value as the result of declines in the credit quality of the issuer, borrower, counterparty, or other entity responsible for payment, underlying collateral, or changes in economic, political, issuer-specific, or other conditions. Certain types of debt instruments can be more sensitive to these factors and therefore more volatile. In addition, debt instruments entail interest rate risk (as interest rates rise, prices usually fall), therefore the Fund's share price may decline during rising rates. Funds that consist of debt instruments with longer durations are generally more sensitive to a rise in interest rates than those with shorter durations. At times, and particularly during periods of market turmoil, all or a large portion of segments of the market may not have an active trading market. As a result, it may be difficult to value these investments and it may not be possible to sell a particular investment or type of investment at any particular time or at an acceptable price. The price of an instrument trading at a negative interest rate responds to interest rate changes like other debt instruments; however, an instrument purchased at a negative interest rate is expected to produce a negative return if held to maturity. • Investments in foreign markets can involve greater risk and volatility than U.S. investments because of adverse market, currency, economic, industry, political, regulatory, geopolitical, or other conditions. • Investments in derivatives can be used to take both long and short positions, be highly volatile, involve leverage (which can magnify losses), and involve risks in addition to the risks of the underlying indicator(s) on which the derivative is based, such as counterparty and liquidity risk. • Investments in below investment grade quality debt instruments can be more volatile and have greater risk of default, or already be in default, than higher-quality debt instruments.
MFS® Limited Maturity Fund	The fund may not achieve its objective and/or you could lose money on your investment in the fund. • Investments in debt instruments may decline in value as the result of declines in the credit quality of the issuer, borrower, counterparty, or other entity responsible for payment, underlying collateral, or changes in economic, political, issuer-specific, or other conditions. Certain types of debt instruments can be more sensitive to these factors and therefore more volatile. In addition, debt instruments entail interest rate risk (as interest rates rise, prices usually fall), therefore the Fund's share price may decline during rising rates.
